

Worksheet 2

Student Name: Anjali Kumari

Branch: MCA

Semester: 3rd

Subject Name: Business Analytics

UID: 25MCA20023

Section/Group: 25MCA-1-A

Date of Performance: 16-08-2026

Subject Code: 25CAH-703

1. Aim/Overview of the practical:

To understand and implement **Pivot Tables and Pivot Charts in Microsoft Excel** for summarizing, analyzing, and visually representing large sets of data.

2. Objective:

- To learn how to create a **Pivot Table** from raw data.
- To summarize data using **Rows, Columns, Values, and Filters** in a Pivot Table.
- To calculate useful summaries such as **Sum, Count, Average, and Total**.
- To create **Pivot Charts** for graphical representation of summarized data.
- To understand how Pivot Tables and Charts help in **data analysis and decision-making**.

3. Apparatus / Requirements:

Microsoft Excel

4. Procedure/Code

- Open the **excel** workbook.
- Select any cell inside the **Sales Data** worksheet.

	A	B	C	D	E	F	G	H	I	J	K
1	Order_ID	Date	Salesman	Product	Unit_Price	City	Quantity	Total_Sales			
2	1001	46046	Vikram Singh	Monitor	18500	Mumbai	5	92500			
3	1002	46075	Gaurav Mishra	Smartphone	32000	Delhi	6	192000			
4	1003	46023	Priya Verma	Keyboard	2200	Mumbai	15	33000			
5	1004	46040	Ananya Singh	Smartphone	32000	Ahmedabad	18	576000			
6	1005	46253	Vikram Singh	Headphones	4500	Chandigarh	9	40500			
7	1006	46183	Rohan Gupta	Smartphones	42000	Mumbai	14	488000			

- Go to the **Insert** tab.

- Click **PivotTable**.

- Click on Table/Range.

- Select Table/Range.

- Click Ok and The **PivotTable Fields** panel will appear on the right side.

- Drag **City** into the **Rows** area, **Total_Sales** into the **Values** area, **Product** into the **Columns** area to compare sales of different products.

Drag fields between areas below:

Filters	Columns
	Product
Rows	Values
City	Sum of Total_Sales

- Drag **Salesman** into the **Filters** area if you want to analyze the data for a particular salesperson.

Filters	Columns
Salesman	Product
Rows	Values
City	Sum of Total_Sales

- The Pivot Table will now summarize the sales data.

Salesman	(All)							
Sum of Total_Sales	Column Labels							
Row Labels	Headphones	Keyboard	Laptop	Monitor	Smartphone	Tablet	Grand Total	
Agra		8800	910000		288000	420000	1626800	
Ahmedabad	45000	63800	260000		576000	280000	1224800	
Amritsar				370000	160000	140000	670000	
Bengaluru			585000		320000	448000	1353000	
Chandigarh	126000	30800	1300000		448000	1092000	2996800	
Delhi	198000	4400	1170000	518000	416000	364000	2670400	
Jaipur	63000		1560000	351500	256000	112000	2342500	
Ludhiana		28600		481000	1280000		1789600	
Mumbai		52800	910000	703000	480000		2145800	
Pune		33000			192000	420000	645000	
Grand Total	432000	222200	6695000	2423500	4416000	3276000	17464700	

- Click anywhere inside the Pivot Table.
- Go to the **Insert** tab.

- Select **PivotChart**.

- Choose a suitable chart type, such as **Column Chart** or **Bar Chart**.
- Click **OK** and Excel will create a chart based on the Pivot Table.

Pivot table and Chart 1

Pivot table and Chart 2

Pivot table and Chart 3

Pivot table and Chart 4

Pivot table and Chart 5

6. Learning outcomes (What I have learnt):

- Create and manage **Pivot Tables** using raw data in Microsoft Excel.
- Summarize and analyze large datasets using **Rows, Columns, Values, and Filters**.
- Perform calculations such as **Sum, Count, and Average** using Pivot Tables.
- Create and customize **Pivot Charts** for visual data representation.
- Analyze data based on different categories such as **products, regions, salespersons, and months**.
- Interpret summarized data to identify **trends, comparisons, and useful insights**.
- Use Pivot Tables and Charts to support **data analysis and decision-making**.
